

Q: Submit the cloned Bug: Submit the
Cloned bug report.

3. Search for the Existing Bug: Use the Bugzilla Search functionality to find the existing bug I want to clone.

4. Open the Existing Bug: I click on the existing bug report to open it and view its details.

5. Clone the Bug: On the bug's page, there is an option to clone it. Look for a clone button and click it.

6. Review and Modify Details: After selecting the option clone the bug, Bugzilla will create a new bug report from pre-filled with information from the existing bug. Review the details and make any necessary modifications.

7. Adjust Summary and Description: Add any additional information, steps to reproduce or content that is relevant to the new bug.

Tool/Software Name: Bugzilla

Bugzilla: Bugzilla is an open-source web-based System for tracking and managing Software defects, issues and tasks. It offers features for bug reporting, issue management, email notifications, customization, Collaboration and access control. It's commonly used in Software development for bug tracking and project Management.

If I want to clone a bug from bugzilla, and report the clone bug, I need to follow necessary steps. Steps are:

1. At first I need a bugzilla account, so I create an account.

2. Login to Bugzilla: start by logging in to my Bugzilla account.
